(Text) Washington has announced the United State's decision  
to begin combat tests of anti-satellite weapons in space very  
soon. Over to our Political Observer Aleksandr Druzhinin: {ep}

Thus the practical implementation of the so-called ''star wars''  
program proclaimed by President Reagan in march last year begins.  
Hitherto, representatives of Reagan's administration, patently  
attempting to mislead the public, have presented the matter as  
if this program is restricted to harmless and completely safe  
scientific research developmental work. The White House was even  
indignant at the actual words ''star wars, '' and asserted that a  
certain Strategic defense Initiative was what was intended. {ep}

Now, when the Pentagon is on the point of launching  
anti-satellite weapons for strike purposes into space, it must

*"USIA Alert"*

defense, but about turning space into a sort of bridgehead for delivering a first strike on other countries. One cannot fail to turn attention to the fact that the United States has announced the decision to start combat testing of weapons in space literally 3 days after the Soviet Union submitted to the United Nations organization a proposal to examine a complex of measures and principles of international cooperation in the peaceful development of space under conditions of its nonmilitarization, at the forthcoming UN General Assembly session. The implementation of these measures would preclude the transformation of space into a military testing range and would create the necessary conditions so that space would be put to the service of peace, security, economic and social progress, and not that of militarism. {ep}

However, the United States has once again shown that such a path is not to its liking, having responded to the Soviet program for the peaceful use of space with practical steps to realize Reagan's ''star wars'' program. {ep}

What could the consequences of these steps by Washington be? It is clear that, having started testing anti-satellite strike weapons, the Pentagon will increase the scale and pace of tests. Appetite, as they say, comes during eating. Thus completely real threats arise of space being transformed into the arena for a new twist in the arms race spiral. The preconditions arise for a further intensification of international tension. However, if one thinks about the immediate, tactical, so to speak, aims of the United States, then surely it would be logical to suppose that the decision to start combat testing of weapons in space is evidently timed to

to begin at the start of September in Geneva. {ep}

The impression is created that certain circles of the Washington administration are calculating to conduct these talks from a position of strength and use them as a screen for hiding U.S. military preparations. However, if such an aim really is being set, then someone in Washington should remember and seriously give thought to the words of Mikhail sergeyevich Gorbachev about the fact that the program for militarization of space, which the United States is implementing, is like a blank wall barring the way to the achievement of an accord in Geneva. {ep}
